

We only and completely work on website development. As part of this we develop React.js components in most optimized and reusable way.

React.js version 18.x is preferable since all our projects had been set up using it.

As we develop UI components, for faster development, we use React.js along with tailwind.js for CSS

We also use, modular CSS for preventing overriding the styles across multiple components.

So, our basic tech stack includes HTML, CSS/SCSS, JavaScript, TypeScript and advanced tech includes React.js, Tailwind and Modular CSS
